

**(R) Hose Assemblies, Rubber, Hydraulic, Steel Wire Reinforced—Part 2: Ordering Information**

1. **Scope**—This SAE Standard covers ordering information for steel wire reinforced rubber hose assemblies using connectors specified in SAE J516 for use in hydraulic systems using petroleum based hydraulic fluids with maximum working pressures of 1.7 to 42 MPa. See SAE J1754-2, Table 8 for hose operating temperature ranges and identification codes.

NOTE— Working pressure is defined as maximum system pressure.

3. Requirements

3.1 Hose Assembly Identification—Hose assemblies shall be identified using Tables 1 to 7 and either Appendix A or Appendix B.

3.2 Construction and Performance—Hose assemblies shall be qualified in accordance with the requirements in SAE J1754-1. Users of this document are advised to control source approval, as required.

1. Connector dash size is based on inch tubing, with each dash size equal to 1/16 inch.
2. ISO connector size is based on ISO 12151-1 with S (Heavy-duty series) only.
3. ISO connector size is based on ISO 12151-2, 3, and 4 with L (Light duty series).
4. ISO connector size is based on ISO 12151-2, 3 and 4 with S (Heavy duty series).
5. ISO connector size is based on ISO 12151-5 & 6 with L (Light duty series) only.

NOTE 1—In Appendix A, B, and Figure 1 the hose assembly end connection description and shape codes are found in SAE J846, Table 6B and Table 7.

NOTE 2—In Appendix B drawing, the end sizes will need to be filled in the blank space, due to the different end sizes in each of the ISO 12151 standards for each letter code. Example: If a 12151-1 end connection with a 13/16-16 UN thread is used, the size and code would be 12 / H.

**NOTE 1:** "X" To be used for identifying special conditions that requires a drawing.

**NOTE 2:** "W" To be used for identifying all alpha code letters not required in the coding identification.

**NOTE 3:** "0" To be used for identifying all numerical numbers not used in the coding identification.
